

Interfacer Middleware

Effortlessly Manage, Track and Store All Your Documents with Our Secure Document Management System.

[Request a Demo](#)

Configurable middleware solution for integrating Clinical IVD devices

Interfacer middleware can be configured to parse & extract data, by communicating with IVD devices.

- Capable of uni & bi directional communication with clinical instruments
- Powerful parsing engine to extract results of tests from IVD devices

Any Instrument, Any Manufacturer!

Interfacer's driverless approach to instrument integration makes it easy to connect it with any new & old devices which may not have readymade drivers

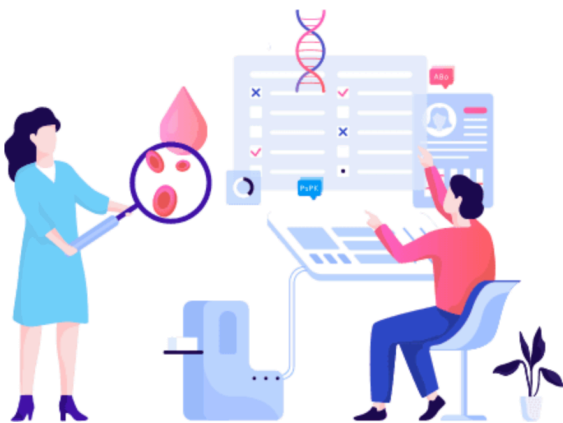

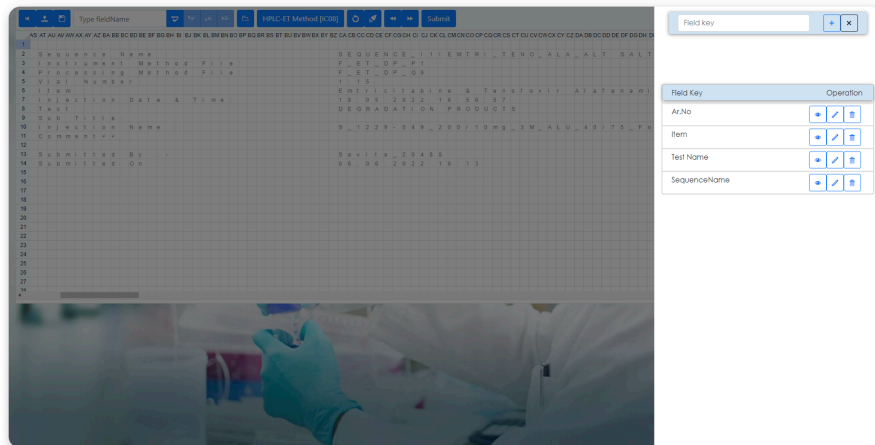

- ⌚ Configurable communication protocol opens up the possibility of integrating any instrument to the market with considerable reduced time & cost.
- ⌚ Several niche instruments that are not supported by drivers can be interfaced by one-time configuration.

Powerful Parsing Engine

Robust & reliable parsing engine to extract information of interest from IVD device output.

- Easy to use Parser tool & setup.
- Extract relevant data from instrument output files.

User-friendly test mapping tool

Equipped with an easy-to-use test mapping tool, which simplifies the test mapping process for the end user.

- Useful data from LIMS can be mapped to instrument specific test parameters.
- Intelligent middleware connecting your LIMS & Instruments.

Integrate with LIS, LIMS & MES solutions

- Interfacer was designed to integrate with external systems like LIS, LIMS, SDMS & MES.
- Capable of file based & database level integration
- Capable of HL7 based integration

Serving a wide range of laboratories

Preferred solution for interfacing clinical instruments in a variety of healthcare, diagnostic & research laboratory settings such as:

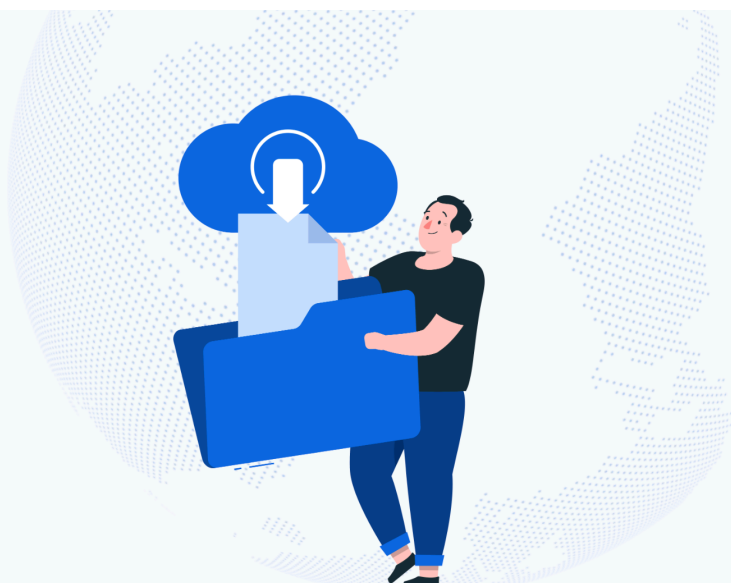

These industries should be arranged horizontally with logos for each industry

- Clinical diagnostic labs
- Biopharmaceuticals
- Referral labs
- Clinical Research Organisations
- Bio Banks
